

Job Listing Website

The job board websites will contain the most commonly used sections, pages, and features. With an Admin control Panel that enables you manage all recruitment activities online. You can add countless jobs and categories manage ads, collect submission fees, etc.

Key Features

Manage Job Ads

Create detailed job profiles including job summary and employer information. Show all jobs posted by the respective company, list similar jobs, and feature selected ads.

Employer Profiles

Companies can create their profiles, add their contact details and describe their business. They can easily post job ads, review candidates, track applicants.

Let companies post job classified ads and the job seekers apply! Your job portal will run itself. Companies have limited access to the job script admin and can manage only their own job offers, applicants, and company details.

Candidate Profiles

After signup, job seekers can add their personal info and career path. They can specify their job preferences, upload their CV, and review their application history.

Job seekers can register with the job portal script. Having an account will make the application process faster and easier - just a few clicks and their resume is sent. As an administrator, you have all applicant details and resumes in a database that you can backup and download.

Pre – Testing Script

This CBT platform will enable you conduct an applicant pre - assessment test and have their scores accessible to employers.

Advanced Job Search

People looking for a new job can search by keyword, location, and employer name. They can further narrow the criteria by selecting category, career level, type, etc.

Job Submissions

Turn your job board website into a career portal and make money by enabling other companies to publish their job classified ads. Submission payments are integrated.

Custom email notifications

As a job board admin you can create individualized email notifications to applicants and companies. Use the available tokens in the admin panel and create custom emails to your job board users.

Easy job board administration

Your job listing website will have an easy back-end where the administrator can manage features and functionality. A customizable content management system that focuses on job management and is equipped with powerful features, quick admin controls.

Responsive User Interface

The website will be mobile-friendly so that visitors can check your property ads from any device
